Abstract

Creation of the General Mechanical Theory of Physical Interactions by the Solution of Own Mechanical Models Faraday and Maxwell. The resume of the director of the International scientific organization "Newton society", the academician of the International academy V.B. Cherepennikov

Constructed by Faraday and Maxwell, own mechanical models of physical interactions have not received in due time the analytical permission in a kind acceptability to physics. "There is nothing self-contradictory in the conception of these sources where the fluid is created, and sinks where it is annihilated. The properties of the fluid are at our disposal, we have made it incompressible, and now we suppose it produced from nothing at certain points and reduced to nothing at others".

"I propose in the rest of this paper to discuss a few electrical and magnetic problems with reference to spheres". "...a mature theory, in which physical facts will be mechanically explained, will be formed by those who by interrogating Nature herself can obtain the only true solution of the questions which the mathematical theory suggests". James Clerk Maxwell. On Faraday's Lines of Force. 1855: 162, 209, 159 electrogravityphysics.com/wp-content/uploads/2018/01/On-Faradays-Force.pdf

In materials of scientific research of the author "Protection against the pseudoscientific swindlers usurping the power of world scientific community is necessary to the Science. About a mechanical essence of physical interactions. A philosophical and natural-science inconsistency of quantum-relativistic subconsciousness" this program has received the analytical permission. Izdatelstvo "Sputnik+". M. 2018 (In Russ)

The solution essence consists in analytical definition of distribution in space of speeds and the accelerations of particles of an ether, radiated by spherical sources and absorbed by spherical drains. Applying a principle of superposition for speeds and acceleration of

Citation: Cherepennikov Vladislav. "The Science Should be Protected from itself not Perceived and not Acknowledged Planetary Crime xxth Century. Before to win Victory over Someone, win a Victory over Itself". *Chronicles of Pharmaceutical Science* 3.1 (2019): 773-779.

particles of an ether at interaction of spherical sources and drains, we define their magnitude on spherical surfaces. Newton's second and third laws allow to define magnitude of jet forces of particles of the ether operating on spherical surfaces of sources and drains in the indicated direction.

Results of research have allowed to receive for the first time more correct and expanded analytical kind practically all equations of physical interactions; to prove, on an example of galactic structures, cyclic sequence of development of material objects, origins of solar system, displacement perihelion Mercury, the nature of an inclination of axes of rotation of planets and their discrepancy with magnetic poles, the pear-shaped form of the Earth opened still by Columbus; to solve "secret" levitating disks John Searl's and the paradoxical phenomena of electrodynamics which do not have consistent correct explanations and so on.

"The extraordinary seriousness of the sad consequences of the crisis in natural science for the fate of earthly civilization is not perceived by the power and not brought to the consciousness of the broad masses." V.V. Kuzmin. Materialy VI Mejdunarodnoy Nauchnoy Konferensiy "Prostranstvo, Vremy, Tygotenie", 19-23 avgyst 2002, St. Peterburg. (In Russ)

"With all due respect to the scientific community, we can not get rid of the horrible thought that it had been misled (which has a number of inside and outside reasons), what on his head has been put of jester's cap relativism. To realize it is sickly and it is humiliating, but bitter and difficult path cleansing is necessary for science". Professor V. Chrasnoyrov. Jurnal "Izobretatel i rasionalizator", №8, 1988 (In Russ)

"Our own science, first of all its basis - a science fundamental, is now in a critical pitiful state. The science should be protected from itself, from its impractical organizational structure, from its bureaucratic the nomenclature elite, infected with monopoly". Professor G. Chromov. Gazeta "Izvestiya", article "The science needs protection", from the 23rd of August, 1989. (In Russ)

"Never I would learn human' small-minded, never would understand, how people a little interest originally great purposes if has not approached to them with my natural-historical methods of research. Here to me also has opened, that for the majority the science is only means of subsistence, and they are ready to idolize even own error if it feeds them". Johann Wolfgang von Goethe. | Johann Peter Eckermann, Conversations with Goethe, ed. J. K. Moorhead and trans. J. Oxenford (1971): 119-120 |.

Unquenchable thirst of knowledge of the world - it is guiding line which conducts from time immemorial mankind to acquiring truth against superstitious prejudices, hypocrisy and lie, to awakening of self-awareness against the oppressors - to original freedom. Through fires and inquisition tortures, through falsifications and interdictions, through persecutions and reprisals the science indefatigably to make one's way, forcing pseudo-scientists, receding to wriggle and adapt, to invent more and more refined criminal ways of a respite of the inevitable doom.

Overwhelmed by efforts of great scientists idealism as antiscientific opposition compelled today imitate under materialism. To exposure of this simple fake, to discharge of ours of "an unconditional debt», willed by V.I. Lenin, on protection of achievements of dialectic materialism the author appeal for help world scientific community.

"Almost from time immemorial, form Democritus and Epicurus, through Archimedes, Descartes, Galileo, Newton, Faraday, Maxwell, Helmholtz to Hertz, Kelvin and Rayleigh obviously dominates aspiration to creation of a mechanical picture of the world... According to

the great representative of classical mechanics V. Thomson: "True sense of a question: whether we understand, or we do not understand the physical phenomenon? - It is reduced to the following: whether we can construct own mechanical model or not?" - the ex-president of Academy of sciences of the USSR academician S.I. Vavilov has been compelled to recognize.

Further S.I. Vavilov continues: "the new facts were, however, and remain now in this sense not understood... Crash of mechanical outlook and enormous growth of mathematical symbolic carried away physicists or towards persistent, obstinate aversion of new physics, hopeless attempts of a mechanical explanation of the non mechanical phenomena, or to idealism of different forms and shades. Other ways, if to speak about spontaneous roads of the experimenters, who were not reflecting on methodological lessons the new physics, was not. Metaphysical materialists, in essence, are won, and won, first of all, by practice, concrete results of new physics and full practical barrenness of own conjectures. In the field of the decision of concrete principle questions the mechanical physics for last 30 years has not given anything. These enemies - last Mohicans, have suffered for a long time shattering defeat".

Sobranie sochineniy AN SSSR. 1956 (3): 35. (In Russ) Thus, the ex-president of Academy of sciences of the USSR S.I. Vavilov tries to inspire to mankind nonsense that the pseudo science represents a true science, and outstanding scientists of all times and the people are "enemies - metaphysical materialists - last Mohicans who for a long time have suffered shattering defeat". Differently: "Where nonsense the sample, there reason-madness"-ascertains Goethe. So pseudoscientific swindlers triumphed "victory" over fundamental science.

What does the Russian Academy of Sciences offer in exchange to dialectic materialism?

Presentation for ignorant consciousness of readers of nonsense about creation of the Universe from a point - singularity, not having the sizes (certainly, by God). Because "all were created by the single God, exactly Single. If there is exist the Single God, a single Providence, then exist and a single subject of researches ... the World is single and learnt by human intellect therefore and only because there is exist the Single God, which had created by a single Providence and the world, and the person, and for this reason there is a single object of research ... In our materialistic (?!!!) the century serious scientists can be only deeply religious people". President Rossiyskoy Akademiy Nauk J.S. Osipov, vice-president V. E. Fortov. Intervj moscovskomy ejenedelniky "Poisk", № 13, 1998. (In Russ). And also a lot of that similar "*nonsense's and absurdity*".

But every day all becomes louder and stronger a voice doubting correctness of such "victory". Academician V.F. Mitkevich and scientists of World scientific community unequivocally define the position in this question: "From all the above it follows, that the creation of a physical theory comprehensive the wide range of the phenomena, is difficult and unlikely to be possible given the negative attitude towards the prior importance of the environment, and objectifying of action in distance as the primary physical phenomenon.

There is no general physical theory yet. But one can be certain claiming that in the future physical thinking will return to the principal ideas of Maxwell and Faraday, and will develop them with the help of recent breakthroughs, and therefore will complete the creation of general physical theory... in any case, the Faraday - Maxwell point of view on the question of direct participation of the environment in all physical processes represents the only possible guiding thread for further success in developing modern physics... All the opponents of the group headed by A.F. Ioffe and S.I. Vavilov, myself included, object against wrong methods and techniques of physical processes interpretation, those that lead to physical idealism and make it difficult to cultivate views consistent with the true nature of things, and therefore hinder the progress of physical science".

Jurnal "Pod znamenem marksizma" 1937. №11-12: 64. (In Russ). "There is nothing self-contradictory in the conception of these sources wherethe fluid is created, and sinks where it is annihilated. The properties of the fiuld are at our disposal, we have made it incompressible, and now we suppose it produced from nothing at certain points and reduced to nothing at others". "I propose in the rest of this paper to discuss a few electrical and magnetic problems with reference to spheres". "a mature theory, in which physical facts will be mechanically explained, will be formed by those who by interrogating Nature herself can obtain the only true solution of the

questions which the mathematical theory suggests". James Clerk Maxwell. On Faraday's Lines of Force. 1855: 162, 209, 159 electro-gravityphysics.com/wp...On-Faradays...Force.pdf

Unfortunately, this fundamental program of research of mechanical essence of physical interactions of spherical bodies and has not been carried out in a kind comprehensible to physics.

In materials of scientific research of the author «Protection against the pseudoscientific swindlers usurping the power of world scientific community is necessary to the Science. About mechanical essence of physical interactions. A philosophical and natural-science inconsistency of quantum-relativistic subconsciousness» this program has received the analytical permission. Izdatelstvo "Sputnik+". M. 2018 (In Russ)

Appealing for help scientists of World scientific community to urgency of change of an antiscientific paradigm of quantum-relativistic sub consciousness dominating at the moment, outstanding scientist-entsiklopedist John Bernal wrote, that "now, having entered such phase of criticism of the theory when an abundantly clear dissatisfaction of mathematical physicists not conformity and not elegance of the quantum theory and the relativity theory cause attempts of their radical reorganization, more radical revision of the theory of a relativity and the quantum theory is necessary, and it will be necessary to try to adapt not somehow present theories, accepting assumptions laying in their basis, and radically to reconsider their logic and philosophical base".

The criterion of truth in choosing the right path for further research, according to the conviction of John Bernal, shared by scientists of the World Scientific Community, should be the work of V.I. Lenin's "Materialism and Empirio-criticism": "Lenin enriched the methodological fundamentals of the natural sciences, he deeply understood the all significance of the natural sciences, both in practical and theoretical respects ... He created the work Materialism and Empirio-criticism, which is the greatest classical Marxist work, the value of which is invaluable. It is in the light of this work that we must consider the issue of determinism and indeterminism, the difference between micro- and macro- physics, the fundamentals of quantum theory and the theory of relativity". John Bernal. Nauka i obchestvo. Sbornik statey i vystupleniy: perevod s anglijskogo IL, M. 1953: 108, 418 (In Russ).

It is a serious problem in which it is necessary to take up of a certain position, and it is obvious, that for the further fruitful development of physics very important that the correct position has been found. Unfortunately, in the pseudo-scientific environment the tendency still prevails, "that for the majority the science is only means of subsistence, and they are ready to idolize even own error if it feeds them". Johann Wolfgang von Goethe. | Johann Peter Eckermann, Conversations with Goethe, ed. J. K. Moorhead and trans. J. Oxenford (1971): 119-120 |.

That is why so it is necessary, that scientists of the International scientific community, misled by pseudoscientific swindlers, has concentrated the attention not to propagation of pseudoscientific theories as it takes place till now, and on protection and revival Fundamental Science. In present conditions when all accessible means, including through curricula of schools and high schools, mass media, to the public inflict antiscientific idealistic and religious world outlook, profound studying, development and propagation of works of classics of natural sciences and dialectic materialism is the major direction of struggle for a science, culture, against barbarity, savagery and destructions of a civilization.

About the Author

Director of “Newton society” and international “Newton Society” scientific organization. Vladislav Borisovich Cherepennikov Encyclopedia “Best people of Russia»/Vrelease/Person Cherepennikov Vladislav Borisovich

Honorary Academician of the International Academy of Quality and Marketing. Member of the Public Assembly of the Ulyanovsk region and the Public Coordination Council of the city of Ulyanovsk. Chairman of the Ulyanovsk regional branch of the People’s Patriotic Union of Russia. He was awarded: the Order “For the revival of Russia. XXI Century “, a diploma” Leader of the present “International Competition” Pilar “; medal and diploma “The Best People of Russia”; a diploma and a gold medal “European quality”; “For Merit” medal.

Organization with an unusual name “Newtonian society” is well known to residents of Ulyanovsk - mainly due to active charity. The Company regularly provides funds for sports competitions and tournaments, organizes excursions and holiday dinners at the cafe for veterans, a patron of the kindergarten and the school pays the best students scholarships, helps victims of Chernobyl and more recently at his expense in Zavolzhsy district of Ulyanovsk was reconstructed playground “Africa”. The head of LLC “Newtonian Society” for almost a decade Vladislav Borisovich Cherepennikov - entrepreneur, scientist and public figure.

Vladislav Borisovich was born July 23, 1945 in Ulan-Ude. From 1964 to 1970 he studied at the Kharkov Aviation Institute. After receiving a university degree, he worked in a branch of the Research Institute of Aviation Technology (JARI) in Kharkov engineer. Four years later he was transferred to a branch in Tashkent JARI a senior engineer, and another four years later moved to Ulyanovsk, where aviation industry, one of the largest in the country has gone from bureau chief to Deputy Director General. In 1985, Vladislav Borisovich was appointed head of tool maintenance machine tool plant in Ulyanovsk city, in 1993, became the director of a small business “Ether”, and in 1996 founded and headed the company “Newton’s society.” I worked at a branch of the Research Institute of Aviation Technology (JARI) in Kharkov engineer. V.B. Cherepennikov - a scientist of international renown. He participated in six international conferences on the fundamental problems of natural science. In 1991 it was published his pamphlet “Science needs protection”, which justified the mechanical nature of physical interactions and philosophical inconsistency of quantum-relativistic subconscious. Based on the resolution of mechanical models of physical interactions in the formulation of Faraday and Maxwell V.B. Cherepennikov managed to get in an analytical form the fundamental equations of theoretical physics in the field of gravity, electrical and magnetic interactions, and weak nuclear forces.

Citation: Cherepennikov Vladislav. “The Science Should be Protected from itself not Perceived and not Acknowledged Planetary Crime xxth Century. Before to win Victory over Someone, win a Victory over Itself”. *Chronicles of Pharmaceutical Science* 3.1 (2019): 773-779.

In 1993, at the III International Conference “Newton and the problems of mechanics of solid and deformable bodies,” it was unanimously elected Director of the International “Newton Society” public organization.

In addition to science, Vladislav Borisovich actively engaged in social activities. He is the author of the Program of socio-economic support for young people and low-income segments of the population, which was approved by public organizations, legislative and executive authorities of the Ulyanovsk region, as well as reflected in the federal law, initiated by the President of Russia VV Putin “On the Public Chamber of the Russian Federation.” The essence of the program is as follows: at all levels of government and municipalities establish a public council (public house) to strengthen the role of the public in government and control of the executive branch; when councils are established non-profit enterprises profit from the activity which goes to charity and social programs. In accordance with applicable law, such companies may be partially or fully exempt from taxes. Currently, the region has created a public meeting of the Ulyanovsk region and urban public coordination council. Vladislav Borisovich is their permanent member. In addition, he holds a responsible post of the chairman of the Ulyanovsk regional branch of the People’s Patriotic Union of Russia. In 2004, for participation in socio-economic programs to transform the city of Moscow and the revival of Russia V.B. Cherepennikov he was awarded a diploma “Leader of the present” International Competition “Pilar” and for outstanding service, contributing to the strengthening of the economy, the greatness and prosperity of Russia, was awarded the Order “For the revival of Russia. XXI Century”.

In 2005, on the proposal of the Board of Ulyanovsk businessmen, editors of the encyclopedia “The Best People of Russia” and the Public Advisory Council for the great contribution to the society consolidation of forces in the development and prosperity of the great Russia was awarded the diploma and the medal “The Best People of Russia”. According to the results of work in 2005 V.B. Cherepennikov was included in the encyclopedia “The Best People of Russia”.

Biographical encyclopedia of successful people in RUSSIA

“WHO IS WHO IN RUSSIA”

(Swiss-Panama Publishing)

Cherepennikov Vladislav Borisovich

Person: engineer-physicist, director of the International scientific organization “Newtonian Society» and «Newton’s society.” Born: 23/07/45, at the Ulan-Ude. Wife Grishina Lyubov Ivanovna (born in 1954) - director of the market, the architect. Daughter Alla (1974) - administrator of the children’s playground “Africa”. Parents: Cherepennikov Boris Alekseevich (1915-2005) - Secretary of the Communist Party of the Kiev district of Kharkov, taught at the Department of aircraft structure HAI; Cherepennikova Alla Aleksandrovna (1919-1991) - the teacher HAI descriptive geometry. Education: I graduated from the Kharkov Aviation Institute (1970), specialty “Mechanical Engineer” aircraft. Career: 1970-1974 Kharkov Aviation Plant Engineer; 1974-1978 - Tashkent aircraft industrial association named. Chkalov (Uzbekistan), senior engineer; 1978 - UAPK (Ulyanovsk), Head of Office, Head of department, head of department, 1986 - Deputy Director General; 1993 - employed; 1996 - Director of “Newton’s society.”

Social activities: in 1991 he was elected director of the International “Newton society” for the work, which is given an analytic solution of the fundamental problem of philosophy and science of the mechanical nature of physical interactions, which explained the phenomena of magnetism, gravity, weak and nuclear interactions. Organizer and participant of international scientific conferences. The invention and patent application the design of opposed two-stroke internal combustion engine, for which he was awarded with a golden medal “European Quality” eponymous International competition. Author of the program of socio-economic support for young people and low-income segments of the population, received approval of public organizations, legislative and executive authorities of the Ulyanovsk region. The program is also reflected in the federal law “On the Public Chamber of the Russian Federation.” Engaged in charitable activities, supporting sports in the Ulyanovsk region. Publications: published with the pressing issues of the relativistic theory of criticism in the collections of scientific conferences in Russia and abroad. Publication of the book “Science needs protection”

Citation: Cherepennikov Vladislav. “The Science Should be Protected from itself not Perceived and not Acknowledged Planetary Crime xxth Century. Before to win Victory over Someone, win a Victory over Itself”. *Chronicles of Pharmaceutical Science* 3.1 (2019): 773-779.

(1991). Awards: Gold Medal "European Quality" - 2006 "(St. Petersburg); the Order "For the revival Russia. XXI Century"; Medal "The Best People of Russia"; winner of the International Competition "Pilar" (2004); Diploma "Leader of the present"; medal of the All-Russian Public Movement "Russian" "For Merit"; Numerous certificates, diplomas and gratitude for their active participation in solving social problems and charitable activities; Honorary Academician of the International Academy for Quality and Marketing. Name V.B. Cherepennikov recorded in the encyclopedia "The Best People of Russia". Hobbies. Sports: wrestling classic, skiing, skating, and swimming. Science: Physics, Philosophy.
